

METHOD AND SYSTEM FOR ADMINISTERING COMPLIANCE WITH INTERNATIONAL SHIPPING REQUIREMENTS

Abstract of the Invention

5

There are provided methods and systems for facilitating international shipment of goods that enable centralized control of both the establishment of and any changes to international shipping requirements. Users can conveniently query the system through remote terminals. Requirement information is provided in a user-useful and friendly manner including matrices of core requirements relating to all shipments and country specific requirements relating to specified origination and/or destination countries. Compliance testing is provided by which a user can evaluate a particular international shipment for compliance with requirements particular to that shipment.
